Fauci-Tagebücher: Veröffentlicht 1.11.2026

Hinter dem Auftauchen der Fauci-Tagebücher steckt eine unglaubliche Geschichte. Sie beinhaltet einen Fehler des mächtigsten Infektionskrankheitsarztes der Welt,
den Mut von Senator Rand Paul, einige grossartige Ernennungen der Trump-Regierung und viele unbenannte Personen (die vorerst unbenannt bleiben sollen).

Sie sind als dreibändige, vollständig indexierte Sammlung im Druck erschienen, die vom **Brownstone Institute** veröffentlicht wurde.
Das ist offensichtlich ziemlich sammelwürdig, gelinde gesagt.
Es ist die unglaubwürdigste Autobiografie, die je veröffentlicht wurde.

Sie können nicht versprechen, dass sie lange so bleiben.
Wer weiss, was passieren wird? Wir werden sehen.
Für den Moment kann man einen beispiellosen Einblick in das Innenleben eines aussergewöhnlich despotischen Mannes nehmen.
Es ist ein Dokument für die Ewigkeit.
Gemäss den Autoren müssen sie nur noch weit verbreiten werden.

For more than two decades, Anthony Fauci kept a private diary. Released by Senator Rand Paul in 2026 in four separate installments, it is brought together here for the first time in a single chronological edition, in three volumes.

Volume I covers 2001 through 2014, the years in which Fauci, as Director of the National Institute of Allergy and Infectious Diseases, became the federal government's leading voice on infectious disease. It opens with his own history of the AIDS epidemic and moves through the anthrax attacks of 2001, the creation of PEPFAR under President George W. Bush, the H5N1 bird flu scare and the 2009 H1N1 pandemic, and the 2014 Ebola outbreak, including the cases treated in the United States. Throughout are his dealings with presidents, cabinet secretaries, members of Congress, and the press.

Fully indexed for the first time, Fauci's entries are reproduced as written and uncorrected; material written by others has been omitted. What remains is his own account of his work, his worries, and the people around him, recorded as events unfolded.

The Diaries of Anthony Fauci: Volume I is followed by Volume II (2015–2020), which runs from Zika through the first year of Covid-19, and Volume III (2021–2022), which closes with his final months in government.

Volume II covers 2015 through 2020. It begins with the aftermath of Ebola and the Zika outbreak and follows the transition from the Obama administration to the Trump administration. In 2020 the diary becomes a near-daily record of the Covid-19 pandemic: the White House Coronavirus Task Force, his work alongside Deborah Birx, Robert Redfield, and Francis Collins, the fights over shutdowns and treatments, the early questions about Wuhan, his constant media appearances, and the threats that brought him a security detail.

As Chief Medical Advisor to President Biden, he records the vaccine rollout, the Delta and Omicron waves, boosters and mandates, the arrival of Paxlovid, and his clashes with Senator Rand Paul over gain-of-function research and the origins of the virus, along with his view of his critics and his preparations to step down.
